t excitement prevails at Rumford
concerning the finding of gold
B Bridge in Byron. Messrs. H.
ain, E. E. and N. B. Jackson visited
d diggings last Friday, and on Satthey returned laden with specimens.
E. Jackson, who has recently
lve days there, was one of the first
who found gold in Colorado, and
there was never any such dieging there was never any such digging do as he found at Coos, Friday. A. ess at Katahdin Iron Works is very

ay last week, a colt that was fastened by halter got his feet through the stall and ill in such a manner that he was choking death. The dog was in the barn, saw he trouble, and running to the house uight Mrs. Whitcomb by her dress and tempted to pull her out of doors, he dog would run towards the barn and hen eatch Mrs. Whitcomb by her clothing, he finally went to the barn, arriving just time to save the life of the colt. Mr. Thitcomb said he had been offered \$100 or the colt, and feels very grateful wards the dog for saving the animal's fe.

fee.

Hon. William Connor of Fairfield, whose evere illness has already been reported, led Friday night, at the age of 83, after eing confined to the house for several reeks. He had largely been engaged in he lumber business, and a large owner of cal estate. For years he was one of the irectors of the People's Bank, Waterville, position which he relinquished only when he infimities of age prevented his attendig to the duties. He was also a trustee of the fairfield Savings Bank for many years, its life has been an eventful one in hat he has not only seen great changes, ut in the experiences growing out of the rar, was called upon to witness years of evere suffering resulting from wounds reviewed by his son, General Selden Connor. Capt. J. B. Crocker, master of the chooner James R. Talbot, who has been laster over thirty years, is one of the deet captains who sails out of Portland, fot only this, but he is the father of four free smartest young captains in the merhant marine. They are Captains E. H. rocker of the schooner Charles E. Balch; B. Crocker, Jr., who is having a new essel built in Bath by Morse Brothers; L. W. Crocker, lately of the schooner Kate L. Morse, and soon to take command of nother Morse vessel; and W. G. Crocker, fee schooner George Moulton, Jr. These our brothers sail to all parts of the world, and for years they do not meet. But they lave all arrived in Bath within the last veek. The reunion was entirely unexected, and the successive surprises as rother after brother hove in sight were appy as they were remarkable.

appy as they were remarkable.

Recently a Mr. Esten, of Worcester, fass., who was formerly an overseer in the roolen mill at Princton, went to Grandoson after his arrival he started out alone, with his gun, for a few hours' hunting, and was soon lost in the woods. Not returning, a large body of men turned out, searching for him in all directions, but without wall. On the second day of his absence a nan transporting supplies through the woods heard a sound as from a person in distress, and following it up found Mr. Search in an exhausted condition, where, out for his timely arrival, he would have appy as they were remarkable Esten in an exhausted condition, where, out for his timely arrival, he would have one died. He had traveled most of the ime for two days without any food, and with a cold rain storm prevailing, and was bout giving up. Mr. Esten was taken to fr. McKechnie's camp where he still renains, being too much exhausted to be noved farther. The place where he was ound is about twelve miles from where he tarted. We have accounts from the highes

ources of vessels being sailed in the most ccurate manner, by the use of the Wateroury watch. Among others a daily paper commented upon this fact, saying editori-dily:
"Our dispatches, Thursday, contained a "Our dispatches, Thursday, contained a remarkable story from Washington, to be effect that a schooner had been navigating the Alaska sea with the aid of a Waterbury Watch, her chronometer having been rocken. This is a big advertisement for he Waterbury Watch, and may be used to great advantage by them, but it should have been accompanied by affidavits. It is a remarkable situation for a crew to be placed in. There were several passengers in board, and the fact that a Waterbury placed in. There were several passengers on board, and the fact that a Waterbury was the only watch among them looks like a sea tale—a regular yarn, as it were." The affidavit was secured which attests to he above statement.

Ladies, rough bands are a horror. Bathe hem well at night in Johnson's Anodyne iniment.

The public debt decreased \$4,869,673 during November.

Eminent physicians everywhere recom-mend Ayer's Cherry Pectoral as the most reliable remedy that can be had for colds, coughs, and all pulmonary disorders. Ask your druggists for Ayer's Almanac; it is the best publication of the kind, and full of information.

The Safest

A ND most powerful alterative is A Ayer's Sarsaparilla. Young and

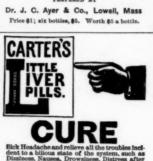

attended him, but he grew continually worse under their care, and everybody expected he would die. I had heard of the remarkable cures effected by Ayer's Sarsaparilla, and decided to have my boy try it. Shortly after he began to take this medicine, the ulcers commenced healing, and, after using several bottles, he was entirely cured. He is now as healthy and strong as any boy of his age."—William F. Dougherty, Hampton, Va.

Hampton, Va.

"In May last, my youngest child, fourteen months old, began to have sores gather on its head and body. We applied various simple remedies without avail. The sores increased in number and discharged coplously. A physician was called, but the sores continued multiply until in a few months they nearly covered the child's head and body. At last we began the use of Ayer's Sarsaparilla. In a few days a marked change for the better was manifest. The sores assumed a more healthy condition, the discharges were gradually dimin-

Bulletin No. 5, of the Storrs Se

Conn., Experiment Station, is devo-the much vexed question of the sour nitrogen in plants. The summary is

nave little doubt that it is free hir-and the experiments of Hellriegel i-cited would seem to prove that the u-bined nitrogen can thus be used. This the cognate question as to how the nix is acquired, demand further study. I tigations in this line are being plane SUMMARY.

3. Peas, alfalfa seruadella, lupine, clin all probability, and apparently leg nous plants in general, are able to se large quantities of nitrogen from the during their period of growth.

2. There is acarely room to doubt free nitrogen of the air is thus acquire plants. free nitrogen of the air is thus acquire plants.

3. That there is a connection bet root tubercles and this acquisition of nen is clearly demonstrated. What this nection is, what are the relations of norganisms to the root tubercles and the quisition of nitrogen, and in general the nitrogen is obtained, are questions to be solved.

the nitrogen is obtained, are questions to be solved.

4. The cereals with which experin have been completed have not manifile his power of acquiring nitrogen, not they have such tubercles as are forms the roots of legumes.

5. In the experiments here reported addition of soil infusions did not seem essary for the production of root tuber A plausible supposition is that the morganisms or their spores were floatin the air, and were deposited in the power of the plants grew.

6. As a rule, the greater the abundan root tubercles in these experiments, larger and more vigorous were the plant the greater was the gain of nitr from the air.

7. In a number of these experiment is similar ones previously reported, was a loss of nitrogen instead of The loss occurred where there were root tubercles; it was especially large out plants, and largest where they had most nitrogen at their disposal in the of nitrates. As the gain of nitrogen biegumes helps explain why they as "renovating crops," the loss in the cathe oats suggests a possible reason they should appear to be an exhau crop.

PRACTICAL INFERENCES.

The ability of legumes to gather pitt

PRACTICAL INFERENCES. PRACTICAL INFRENCES.

The ability of legumes to gather pitr from the air helps to explain the usefu of clover, affaifa, peas, beans, vetches cow peas as renovating crops, and enfthe importance of using these crops to store fertility to exhausted soils. It dicious use of mineral fertilizers (con lng phosphoric acid, potash and lime) enable the farmer to grow crops of legu which after being fed to his stock with proper care to collect and preserved. which after being fed to his stock with proper care to collect and preser manure, both liquid and solid, enable to return a "complete fertilizer" in shape of barnyard manure to his land further advantage of growing these is that the nitrogenous material, prowhich they contain in such great a dance, is especially valuable for fodder in Conclusion.

This subject has a wider significance.

dance, is especially valuable for fodder
IN CONCLUSION.

This subject has a wider significance
what has been said above implies,
future welfare of our race, material, is
lectual and moral, depends upon the
eupply, or, in other words, upon the
duct of the soil. This in turn reduces
of the soil of the soil of the come,
sured in the deposits of phosphates
potash sails already discovered, but
probability of a sufficient supply of n
gen has been questioned. This coatlie
the fertilizing elements escapes from
soils into the air and into the sea, a
taken away by crops, and not compl
returned. Artificial fertilizers promis
meet but a small fraction of the comin
mand. If, as has been urged, the exh
leas stores of the atmosphere are not a
able to plants, the outlook is dark eno
But if the farmer may use his crog
gather it, without money and wit
price, we may dismiss our soiled
with the assurance that plants obtain n
gen from the air, the fear of starvatio
with the assurance that plants obtain n
